

Fig.	Description	Art. No.	Pack Qty.
1	Beulenfix Weld Gun	0691 500 075	1
2	Beulenfix Dent Puller	0691 500 076	1
3	Universal Weld Pins, 2.0 mm	0691 500 080	1000
4	Weld Pins, extra thick, 2.6 mm	0691 500 081	
5	Moulding Rivet for Opel etc.	0691 500 082	1
6	Magnetic Adapter for Moulding Rivets	0691 500 074	

Technical Data

Power supply	220 Volt, 50 Hz
Connect load	4 kVA
No-load voltage	3 V
Weight	6 kg

Beulenfix

Panel Straightener ideal for double-skinned bodywork

Ideally suited for the straightening of accessible dents and double-skinned panels on motor vehicle bodywork.

Application

Use the bolt welding gun to spot-weld the weld pins bolts to the polished surface of dents. For elongated dents the pins should be welded approx. every 3 cm depending on dent shape. The dent puller is then pushed onto the spot-weld pins and tightened by means of the knurled tensioning nut.

Now operate the sliding weight to straighten out the dent quickly and simply. The puller bolts are available in either 2.0 or 2.6 mm diameter, but are welded and pulled with the same chuck. Finally, snap off the bolts at the head and grind down to flush fit.

The Beulenfix Panel Straightener can also be used to weld rivets used by Opel, Ford, Renault and other manufactures to mount moulding clips. For this you will need the magnetic adapter which must be fitted in place of the universal chuck.
