

NAIL CLAMPS

Material:

- Clamp: Polyethylene, highly impact-resistant.
- Nail: Steel, specially hardened and specially galvanized.

Color:

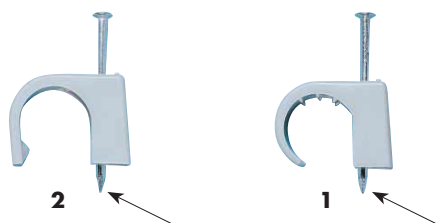

- Gray.

Properties:

- Very high shape stability.
- Can be applied in a wide temperature range (-40°C to +100°C).
- Very good clamping properties, highly elastic, dimensionally stable.
- UV-resistant.
- **Halogen- and silicone-free.**

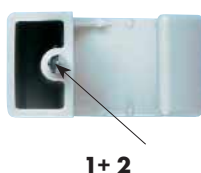

1 = Multi-use clamp

2 = Nail clamp

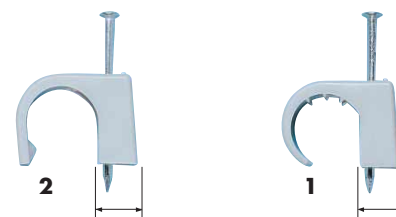

Preinstalled nail

→ Improved and simplified centering.

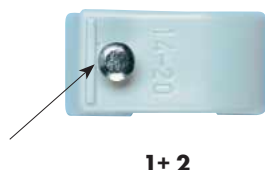

Nail is guided

→ High stability during installation (nail knocked in).

Wide base

→ Secure hold on a variety of different surfaces.
→ Contact surface does not damage plaster.

1+2

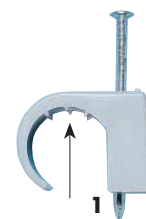

Knock-in stop

→ No deformation of the clamp if knocked in too far.

Special nail head

→ Improved impact force transmission (head shape results in improved application of impact force in the center).

"Clawing" of multi-use clamps

→ Prevents cables from slipping (axial attachment for full utilization of the clamping range).
