

# Crash Check

## Electronic quick-checker for testing the paintwork on steel.

The checker uses its electronic magnetic sensor to effortlessly locate suspicious areas, e.g. where a steel vehicle body has been painted over or repaired, or where there is rust damage.

**Dealers in Germany must provide one year's warranty.**

**Crash Check allows the dealer,**

- When buying a car, to identify quickly any "hidden" damage.
- When selling a car, to convince the customer that it is in good condition.

### green

Paint is no thicker than in its original state; max. thickness 180 µm

### yellow

Paint is thicker and possibly consists of several layers; max. thickness 450 µm

### red

Warning: has been filled; thicker than 450 µm
